Professional Summary

Motivated Software Engineer with hands-on experience building Android and full-stack applications using Kotlin, Jetpack Compose, FastAPI, and Firebase. Proficient in MVVM, Clean Architecture, REST APIs, and AI integration, with a passion for developing scalable, high-performance software solutions.

Education

Anand Institute of Higher Technology <i>B.E Computer Science and Engineering, CGPA - 7.7</i>	2022 – 2026 <i>Chennai</i>
Peniel Matriculation Higher Secondary School <i>HSC, Percentage - 81%</i>	2021 – 2022 <i>Chennai</i>
Peniel Matriculation Higher Secondary School <i>SSLC, Percentage - 69%</i>	2019 – 2020 <i>Chennai</i>

Technical Skills

Languages: Kotlin , C# , Python , SQL
Frameworks: Jetpack Compose , Material Design 3 , Retrofit , Hilt ,
Tools: Android Studio , Git & GitHub , Postman , VScode
Databases: Firebase , PostgreSQL

Experience

SaneForce <i>App Developer Intern</i>	Chennai <i>2026, March – 2026, June</i>
– Developed Android features using Kotlin and Jetpack Compose in an Agile development environment. – Integrated REST APIs, resolved application bugs, and contributed to UI improvements, enhancing application stability and user experience.	

Projects

Real-Time Chat Application <i>Kotlin, Jetpack Compose, Firebase</i>	2026
– Architected a real-time Android chat application using Jetpack Compose, MVVM, Clean Architecture, Hilt, and Room Database, enabling scalable architecture and reactive state management with Kotlin Coroutines and Flow. – Engineered secure messaging using Firebase Authentication, Cloud Firestore, and BiometricPrompt, delivering real-time synchronization, contact requests, username validation, and biometric authentication across 10+ Compose screens.	
AI Fashion Recommendation App <i>Kotlin, Jetpack Compose, FastAPI</i>	2026
– Enabling REST API communication, local persistence, and responsive UI with Kotlin Coroutines.. – Developed a rule-based recommendation engine that generated personalized fashion suggestions from user search history, product categories, and popularity trends while integrating product search, cart management, purchase history, and dynamic product selection into a modern e-commerce workflow.	
Cyber Safety AI Moderation System <i>FastAPI, PyTorch, MongoDB</i>	2026
– Architected a multi-modal AI content moderation system using FastAPI, PyTorch, and MongoDB, integrating Toxic-BERT, CLIP, BLIP, and OpenCV to detect toxic text, NSFW images, and violent video content providing confidence-based risk scoring, explainable AI, and audit logging. – Engineered an end-to-end moderation pipeline that automated text, image, and frame-by-frame video analysis through REST APIs, streamlining moderation through rule-based validation, explainable AI, CSV audit export, and scalable backend APIs.
